SUBMISSION OF ENSCO TRIAL BURN PLAN AND SAMPLING PROTOCOL -JNC-13-86

Ref: Activity Identification Number ID-0615

Dear Dr. Sterling:

Enclosed is a copy of ENSCO's Trial Burn Plan for the F020 through F028 wastes. As stated on page 40 of the plan, the Phase I data, which was submitted earlier to you, is for burning the predominantly organic manufacturing and formulating processing wastes that are included among the F020 through F027 wastes. The POHCs for this liquid mixture trial burn were trichloroethane, trichlorobenzene, and chlorobenzene.

Phase II is for incineration of soils and other predominantly inorganic solids contaminated with such wastes. Phase II was completed last week and the results will be submitted to you as soon as possible. The POHCs for the second trial burn were carbon tetrachloride, perchloroethylene, and trichloroethane.

ENSCO is performing the PCB test burn for certification this week. Information from this test can also be provided as soon as it becomes available.

Also enclosed is the sampling protocol developed to obtain a representative sample of the NCBC soil for the constituents listed on Table 1 of the protocol (identified as Attachment B in previous correspondence to you). Please let us know if this is acceptable to you so that we can make subcontract arrangements for the sampling and analysis for this portion of the process.

Dr. Doreen Sterling
